ACCREDITATION MANAGEMENT SYSTEM

Ma. Eliza D. Mapanoo

Abstract

Accreditation Management System (AMS) uses a breadth-first algorithm to dig out digitally transformed accreditation papers forms of evidence-based on the query inputted by the accreditors. The development aimed to have centralized document management system software that handles the bulk of digitally transformed papers into an image and search it instantly. It is developed under Visual Studio 2010 for programming and Access to handle its database. The breadth-first algorithm was incorporated in searching evidence based on the query supplied by the end-user. The results and discussion shows how it helps key personnel in digitizing documents and create an identifier for easy retrieval,
